

These are the upcoming blood drives already set. We need lots of new drives in order to have enough blood during this time of extreme shortage. Normally donated blood is transfused within 72 hours, but today's shortages have blood being transfused in only 24 hours. Blood safety is still assured as blood undergoes 18 hours of testing to assure its safety. If you can hold a drive or sponsor one at a community location, please call Russ Colwell at 561-252-2901
